PRANET PATEL

647-507-7308 | p2patel252@gmail.com | linkedin.com/in/pranet-patel | pranetpatel.vercel.app

Engineering Science student at Western (Ivey AEO) who builds AI tools that find margin and cash problems inside small operating businesses. Shipped six production products at GENIE AI and built Leakfinder, an AI diagnostic for service businesses.

EXPERIENCE

Product Intern Apr 2026 – Sep 2026

GENIE AI / BOS, production products across the studio runbos.ai · ryzn.one · lingua.family

- Shipped 6 live products in 6 months, from first build to production on Vercel, including brasstally.com and bosmba.com.
- Ryzn: built mentor matching, org admin, invites, public profiles, and web push, with app and API on 1 origin.
- Brass Tally: automated bookkeeping entry with AI receipt extraction and Plaid bank sync, replacing manual ledger input.
- Lingua: built a voice-first PWA with named AI tutors, a parent PIN, and a Node backend for auth, sync, and speech scoring.
- BOS MBA: built a skill-match quiz, applications, and a learner portal; Postmark emails both applicant and team.
- Owned deploys and handoff docs (auth, env, migrations) for all 6, so the team now runs them without me.

AI Engineer Nov 2025 – Feb 2026

Nexa Technology Inc, AI-powered agricultural marketplace Greater Toronto Area, ON

- Built an AI pricing algorithm for marketplace listings that reached ~95% accuracy.
- Launched a customer support chatbot that reached ~90% user satisfaction.
- Defined backend requirements: data inputs, ML pipeline specs, and model architecture.
- Wrote training prompts and reference solutions that improved production LLM response quality.

Swim Instructor & Deck Supervisor Feb 2024 – Present

Super Swims LTD., aquatics instruction and facility operations Brampton, ON

- Supervise a team of 8+ instructors: scheduling, safety compliance, and daily operations.
- Built OT-Notes (React Native / Expo / Supabase) with speech-to-text, saving supervisors ~15 min per hour.

PROJECTS

Leakfinder Nov 2026

AI tool that finds money leaks in small HVAC and plumbing businesses github.com/pranetpatel/leakfinder

- Runs 5 checks on a CSV of past jobs: losing job types, price gaps, lapsed customers, unpaid invoices, and seasonality.
- Flags technicians charging 10%+ below peers, invoices unpaid 60+ days, and tune-up customers silent for 12 months.
- Prices each leak in dollars using a $45/hr labour cost and 25% target margin, with a confidence note on every finding.
- Claude drafts a fix per finding; a person approves each one, and a checker flags any number the model invents.
- Validated on 794 synthetic jobs with 5 planted problems; 22 automated tests pass, and no customer names leave the browser.

Golf Simulator System Dec 2025 – 2026

Custom launch monitor with computer-vision tracking, completed Python · OpenCV · Raspberry Pi

- Built the full simulator from scratch: metal-conduit frame, 2 high-speed cameras, and IR floodlights.
- Wrote OpenCV ball tracking that reached ~85% agreement with range data, with Raspberry Pi sensor fusion.

TECHNICAL SKILLS

AI & Data: LLM integration (Claude, OpenAI), prompt engineering, financial analysis (margins, pricing, AR), OpenCV

Languages: Python, TypeScript, JavaScript, SQL

Frameworks & Infrastructure: Next.js, React, Node.js, PostgreSQL, Supabase, Vercel, Docker, Plaid API

EDUCATION & CERTIFICATIONS

University of Western Ontario, Bachelor of Engineering Science Sept 2025 – Present

Ivey AEO Scholar, Scholarship of Distinction · London, ON

Certifications: AWS Cloud Practitioner · Cisco Introduction to Cybersecurity · IBM AI Fundamentals · Onshape CAD Associate
